

# Digitech USB Cassette – Ripping Cassette Tapes to your PC

With this device you can rip old audio cassettes to your computer just by connecting it via a usb port. To do this follow the procedure below:

1. Plug your USB Cassette deck into the power point and connect the USB to your computer. It will show 'installing device software' to indicate that the computer can see the device.
2. Download and install [GoldWave](#) Digital Audio Editor.
3. Start [GoldWave](#) and open a new document, selecting your desired length and file format.
4. Hit the record button in [GoldWave](#), then run your cassette.

As the cassette plays the audio will be recorded into [GoldWave](#) as a digital audio file. From there you can save the file in an audio format of your choice.
